

## **Electro-Optical Instrumentation**

Sensing and Measuring with Lasers

by: S. Donati, Prentice Hall, USA, 2004  
XVIII+425 pages, bound, price: US\$ 90,  
ISBN 013 0161610-9

# Electro-Optical Instrumentation

## Table of Contents

### **1 Introduction**

**2 Alignment, Pointing and Sizing Instruments** (Alignment, Pointing and Tracking - The Quadrant Photodiode - Position Sensing Detector - Position Sensing with Reticles - Laser Level -Wire Diameter Sensor - Particle Sizing)

**3 Laser Telemeters** (Triangulation - Time of Flight Telemeters - Power Budget - System Equation - Accuracy of the Pulsed Telemeter - Accuracy of the Sine-Wave Telemeter - The Ambiguity Problem - Intrinsic Precision and Calibration - Transmitter and Receiver Optics -Instrumental Developments of Telemeters - The LIDAR )

**4 Laser Interferometry** (Overview - Basic Laser Interferometer - Measuring with the Interferometer - Performance Parameters - Ultimate Limits - Speckle-Related Errors - Read-out Configurations of Interferometry - Laser Vibrometry - Other Applications of Injection Interferometry - Absolute Distance Measurements - Angle Measurements - White Light Interferometry - Profilometry)

**5 Speckle-Ppattern Instruments** (Speckle Properties - Speckle in Single-Point Interferometers - Speckle Regime in Vibration Measurements - Speckle Regime in Displacement Measurements - The Problem of Speckle Phase-Error Correction Electronic Speckle Pattern Interferometry)

**6 Velocimetry** (Principle of Operation - The Velocimeter as an Interferometer - Performance Parameters - Accuracy of the Doppler Frequency - Alignment and Positioning Error- Direction Discrimination- Placement of the Photodetector - Particle Seeding - Electronic Processing of the Doppler Signal - Time Domain Processing - Optical Configurations )

**7 Electro-Optical Gyroscopes** (Overview - The Sagnac Effect - Basic Gyro Configurations - Development of the RLG - The Dithered Laser Ring Gyro DRLG - The Ring Zeeman Laser Gyro - Performances of RLGs - The Fiber Optics Gyro - The Open-Loop Fiber Optic Gyro - Requirements on FOG Components - Technology to Implement the FOG - The Closed-Loop FOG - The Resonant Gyro and Other Configurations - Integrated Gyro Configurations - Other Approaches, MEMS, piezo )

**8 Fiber Optic Sensors** (Introduction - Classification of OFS - Outline of OFS - The Optical Strain Gage: A Case Study - Readout Configuration -Intensity Readout - Polarimetric Readout - Interferometric Readout - Multiplexied and Distributed OFS )

**Appendixes:** A0 Nomenclature - A1 Lasers for Instrumentation - A2 Basic Optical Interferometers - A3 Propagation through the Atmosphere - A4 Optimum Filter for Timing - A5 Propagation and Diffraction - A6 Source of Information on Electro-optical Instrumentation
